Dear

In AD and local group policy have set 3 times wrong password will lock out the account .

But in this condition The Policy haven't work

When user log in workstation and then idle it ,screen saver will run and log the workstation ,

at that time ,this user try to log in other workstation but failure ,the account will log out , but he also

can log in the original Desktop ,although he try more time in original Desktop ,it is a risk that a user

can try more time

1. Why although the account is lock out ,but he can log in the workstation when he have log in before

2.How can Solve the problem

Best Regards

.
