This message is in regards to a previous post.

http://groups.google.com/group/microsoft.public.windows.server.active_directory/browse_frm/thread/d77a841

My main goal is to stop any connecting computer from going ANYWHERE other than the RRAS server it is connected to without making changes to

Group Policy (We only want these changes to matter when connected through RRAS).

I would like to do this with filters, but both the "Inbound Filters" and "Outbound Filters" buttons are grayed out. Does anybody know why this is, or how to resolve my initial issues without filters?

thank you for your advice
