SBS 2003 up to date server, client is xp pro both have all updates

for some reason i have a user who has lost all permissions to write/save to shares and folders also cant send using exchange but mailbox opens using outlook2003 her permissions are as everyone else no changes were made to the

server or folders she can browse to the shares and map them her logon script

and GP run it started on one folder then apply gradually to the rest now she

can only save to desktop not even my docs even though its not redirected!

looked in event logs nothing in security other than event Event ID 537

Status

Code 0xC000006D Subcode 0xC0000133 which seems have something to do with

Re: user permissions and security

the
time but i have check that the server and pc are the same even though the
user has trouble on all pc's not just her own the only group membership i
can
apply to her that works is the administrators account and it would be mad
for
me to leave her on that.
