

GPO Assigned Logon Scripts

Hi,

Hopefully a quick question, currently all our users have "Local Admin" rights on their workstations, i'm trying to migrate away from this, but i've encountered problems as their logon scripts write files to the Windows directory (which is obviously restricted for normal domain users).

I'd like to change to logon scripts (batch files) to VBS but my question is, when a logon script is assigned to a user in GPO, does the script run with the same rights as the user logging on, or as SYSTEM, or even another account?

Many thanks

Jon
