I found some troubleshooting article on technet.. so I changed the registry to enable logging. I tried to use the site again, and there were no new log entries on the adfsaccount server, the adfs web server has some info.. but no errors.

Here is the ifsext log from the adfsweb server..

```
3524.3640> WsExt-Trace: Mar 21 07 16:34:37 GetCustomHeader: returning TRUE.
Found custom header: TRUE
3524.3640> WsExt-Trace: Mar 21 07 16:34:37 IsClientFormsCapable: User agent
is Mozilla/4.0 (compatible; MSIE 6.0; Windows NT 5.1)
3524.3640> WsExt-Trace: Mar 21 07 16:34:37 IsClientFormsCapable: Found
browser user agent -- forms capable.
3524.3640> WsExt-Trace: Mar 21 07 16:34:37 GetServerPort: returning 0.

What is the UI ?

The only event I see is on the adfsweb server, "The adfs web agent for windows nt token-based applications successfully retrieved trust information from the federation service"

where are the debug logs and on what computer?

I'm not sure what Roger is asking about ASP.Net support, how do I find that?

Also how do I know/tell if aspx is working?

thanks

John

In order to troubleshoot ADFS, you need to look at the detailed error messages provided in the UI, the application event log and in the debug logs produced by the federation server itself. Please review that info and provide as much detail here as you can.

Re: ADFS

I'm using the ADFS_Step-by-Step_Guide.doc to setup the lab computers.

I'm on page 62, Access the Windows SharePoint Servers App. So I'm

logged into adfsclient with the Adamcar account. Also I should note I'm

using WSS3 and not WSS2.

I only did the token apps, nothing with claims.

From the adfsclient I go to <https://adfsweb> I receive the choose your

home realm page, select A. Datum, hit submit. Then I get this error..

Server error in '/adfs/ Application..

requested URL: /adfs/clientlogon.aspx

Please advise..

thanks

John
