Hi

Check event log for errors, and DNS configuration.

Also have a look at

<http://support.microsoft.com/kb/810739>

---

I hope that the information above helps you.

Have a Nice day.

Jorge Silva

I have 8 servers that I would like to block access to across the network. Each of these servers resides in the parent domain. I would like to block the child domain from accessing them. I have tried to apply a GPO that specifies the CHILDDOMAIN\Domain Users are 'Denied access to this computer from the network' but the GPO is only applying to the W2K3 servers. Is there a reason why it is not applying to the W2K servers? I need to block access to them. Is there possibly a different way to do this?
