I am not 100% sure but I believe you will be ok with this. You are just extending the schema with disk 2, you will still use your Portuguese language disk to do the upgrade.

Thanks, i only have one question.
The language of the windows 2003 and windows 2003 r2 are

Re: Dcpromo in windows 2003 and windows 2003 R2

not equal
(one
it's
english and other it's portuguese), this issue does not matter?
"Myweb" wrote:

Hello Jose,

Run adprep /forestprep on the 2003 server
from the second R2 cd to
update the schema to the new version on the
2003 server.

Best regards

Hi, i've one server with
windows 2003 std in
english that it's
our primary domain
controller. Now i buy a new
server with windows
2003 server R2 in
portuguese. When i try to
put this second server
as a backup domain
controller it gives me an
error and a message
that tells that the active
directory schema of origin
it's not
equal to the destiny active
directory shema. Why this
error
occurs? Because the
language or because the
windows 2003 r2 and
windows 2003 can not be
pdc and bdc one of each
other?
