Hello Lawrence,

Unfortunately no, the security assignments are done at login.

Best regards

Sorry maybe I didn't make myself clear, what I meant to ask is this:
Is there any way to refresh a user's group membership WITHOUT them having to log off and on again. I know that the server doesn't require rebooting, that would trully be awfull! :)

Thanks

Lawrence

Hello Lawrence,

Normally you just add the user to the group and give some time for replication in the domain. Then the user has to log off and log on again and that's it. There is never a need for server rebooting for this changes.

Best regards

Hi all,

We have recently come across an issue which requires us to

Re: Update user AD group membership without rebooting

be able
to update a user's group membership (as shown by gpresult)
WITHOUT
rebooting. We have 2 W2K3 DCs, and without rebooting,
gpresult will
not show new groups, although if the groups are used as
security
groups they obviously work immediately. I have come
across many
questions similar to this without any definitive answer, so
can
someone help us out?

Thanks
