I can only set LDAP read permissions to all the tree? Not to some portions (OUs) of the tree?

Joe Kaplan escreveu:

From the LDAP perspective, you can't restrict this. If the users can read objects in the tree, then they can use the object as a base DN in a query and can use subtree, one level or base for their query level.

Hi,

I want to have a Windows 2003 domain user performing LDAP queries only to a certain scope (subtree) of the entire Active Directory tree. I only have one Windows 2003 domain.

Is there a way to restrict LDAP queries of a particular user?

Is this possible? If yes, how?

TIA,

Clemente
Portugal
