Ping times are less than 1ms

Is DNS setup correctly?
If you ping the server by FQDN how much time to get response?

Thanks for the reply.
Since I posted the original message, what has happened is I ran dsa.msc (or dssite.msc, etc) on the boxes with problems and left it alone and it eventually opened. This took at least 20 minutes. After this initial connection took place the tools subsequently do connect/open ok – although somewhat slowly. Running dsa.msc as you suggested also opens but somewhat slowly. Barring network issues – which I'm not seeing other evidence of – what would cause the incredibly slow initial connection and then the improved connection time after that initial connection is allowed to complete?

Thanks

Hi
and if you do from cmd
dsa.msc /domain=yourdomainname

Re: Security issue?

or
dsa.msc /server=server1.yourdomainname
I hope that the information above helps you.
Have a Nice day.

I have a small domain. From some of the
machines if I try to run an mmc
which
needs to connect to a DC – such as ADUC,
Sites and Services, etc – the
connection never is successful. It just hangs
at the hour glass. If I
type
dsa.msc or dssite.msc from the RUN box
nothing happens but if I try to
logoff
the machine I get an mmc error like its still
trying to make the
connection.

I can successfully remotely connect to the
administrative shares on the
DCs
from the troubled machines. Previously I
removed and re-added one of
the
machines to the domain with no change.
Removing/adding any of the
machines
in
no longer an option at this point.

I can ping all over the domain ok.

Some machines with apparently the same
config, OU membership,
everything
the same can open the ADUC, dsa.msc, etc.

There are absolutely no relevant errors in the
Event Logs. I'm at a
loss.
We
do have multiple GPO settings in place but
I'm not aware of settings
that

Re: Security issue?

could possible cause this scenario

I can open "non-secure" mmcs such as
compmgmt, etc on the local
machines
with the problem
Thanks
