Hello Carlos,

You can set the password policy only on domain level, not on OU's. With server 2008 this will be possible. It is not possible to block the password policy for some users.

Hi Florian,

I linked the policy first to an OU which contains all my non built-in accounts and then to an OU which contains all my workstation. However, it has not worked.

If i have to link the policy to the domain how i can exclude built-in accounts to change their password periodically?

Many Thanks

Regards

Carlos Sabelli

However, the policy doesn't apply to users.

I suspect that there is a problem with Active Directory because when i run DCDIAG the following error occurs:

[log output]

Are these facts related?

Not necessarily. DCDIAG will throw a warning whenever there are events in the eventlog. Check those events and see if they point to a serious error.

Where did you link the policy to? Remember: it must be linked at domain level and has to have the highest precedence (over all other password policy GPs). In order to take effect over an account, the user needs to change the password. Users won't be prompted to change their passwords if they are valid.

cheers,

Florian
