- 

- Is it possible for you to disable team and work nly with one NIC, just for testing purposes, if you can do that, after you disable it reboot the DC.
- You may also fire up the Network Monitor to check what is happening at communications level.
- Do you have any errors on event log?

---

I hope that the information above helps you.  
Have a Nice day.

Three physical NIC's installed. I'll explain the configuration:

NIC1: HP integrated NIC  
NIC2: HP integrated NIC  
NIC3: HP PCI but disabled. We order all our HP servers with a third NIC. These NICs go on our backup network. Since this is a DC, the NIC will remain disabled.

NIC1 and NIC2 are teamed together using HP's teaming software. As I mentioned above, breaking this team and running with one enabled NIC is something I haven't done. But since it worked before in a teamed configuration, I'm curious if a resolution can be obtained before this I take that step.

Thanks for your help!  
Kevin
