Hi

If it's to be applied to user you must link the GPO where the users are and not the workstations.

I am trying to apply a logon script to a group of computers in an OU which contains only computer accounts so that a logon script will apply to a certain group of users. I tried embedding the logon script in the User Config\Windows Settings\Scripts (Logon/Logoff) User Configuration object of the GPO which is linked to this OU, confirming the link is active and making certain to place the script withint the GUID logon scripts folder and spell out the full path to that folder But the script is not running. What am I missing? Must a logon script embedded in a GPO apply to an OU containing user accounts only?
