It is a Security Group that I am using to Delegate Control to. I was users in that group to be able to ADD/REMOVE computers from the domain in that OU. If that involves creating an account and joining to the domain, then, yes, both.  
Thanks!

You should use Security groups instead of single user accounts  
You want the ability to create computer objects in that OU, or Join computers to the Domain, or both?

Here are the steps I followed, still get Access Denied, I must be missing or misunderstanding something:

- 1.. On your domain control, click Start, point to Administrative Tools, and select Active Directory Users and Computers.
- 2.. Right click the container that you want the user to create computer accounts in and select Delegate Control.
- 3.. Click Next.
- 4.. Click Add.
- 5.. Add the appropriate user account and click Next.
- 6.. Click the Create custom task to delegate option and click Next.
- 7.. Click Only the following objects in the folder.

Re: How grant rights to add servers to domain into a particular OU

- 8.. Click Computer Objects and Create selected objects in this folder.  
Click Next.
- 9.. Click Create all child object and click Next.
- 10.. Click Finish.

Ok,  
everything in the link that I provided before.

Thanks for the reply.  
I want this group to be able to add their  
department servers to our  
domain. They do not have domain  
controllers; they do not have a domain.  
They have 200 servers (file/print/web/etc.)  
that are just part of  
workgroup and they are in need of joining  
our domain.

Hi  
Assuming that you're talking  
about DCs, check:  
<http://blogs.dirteam.com/blogs/jorge/archive/2006/01/05/369.aspx>

Hi,  
I am  
looking for  
documentation  
on how to  
give a  
domain  
group, with  
Domain  
Users in it,  
ability to  
add and  
remove  
servers  
from a  
domain  
and  
specifically  
one  
particular  
OU.

I have  
created an  
Organization  
Unit.

I have  
created a  
group, let's  
call it OU  
Server  
Admins.

I have  
added  
domain  
users to that  
group.

Re: How grant rights to add servers to domain into a particular OU

I have went  
to the  
Properties  
of the OU I  
want them  
to manage.  
I have given  
the OU  
Server  
Admins  
group  
"Special  
Permissions"  
of Full  
Control on  
the  
Computer  
Object.  
I have  
logged into  
a server that  
is in a  
workgroup  
with a local  
account.  
I have tried  
to add that  
server to the  
domain  
using a user  
account  
that is in the  
OU Server  
Admins  
group.  
"Bad  
username or  
password"  
is the  
message I  
receive.

I assume  
there is  
more to do  
in order to  
set this up  
correctly?  
Thanks in  
advance.
