Hi,

I have a question regarding the "Log on to" tab for a user (User Properties --> Account --> Log on to...). I can specify a NetBIOS or a DNS name, but the length of the name is limited to 15 characters, so I would like to instead be able to specify an IP address. Is there a way to specify an IP address at that place, or is there another way to restrict access by IP address ?

Thank you.

.
