But there is something else using that account which is locking him/her out.

(OP) Check for ODBC configured connections. Unusual to have Administrator, but it wouldn't surprise me.

Yes I have reset the password for the particular user account couple of days ago using ADUC,since then he can log on to either XP or 2000,whichever he logs on first.

The account is running on two different m/c's(one is a XP and the other 2000).

Let me run the tool(eventcombMT.exe).

I am assuming the lock out is caused by network mapped drive.

Once I ran this tool how can I solve this issue cause this user

has to run

his profile

on these 2 m/c's ?

"Paul Bergson [MVP-DS]" wrote:

Is the account logged into more than one machine or is it running

a service

on the same machine? A

user could have mapped

drives to a

resource from

one

machine, on a different

machine he changes his

password and then

the first

machine attempts to stay

mapped to a drive and the

password is no

longer

correct and eventually locks

the user out. Or after a

password is

changed a

service is running that

attempts to authenticate with

an old

password. To help try and

track down where the

account is getting

locked

out use eventcombMT.exe

from the Account Lockout

tools found out  
Microsoft's website. Use the  
built in search  
AccountLockouts and  
search in the created  
text files for the user in  
question.

Hi All,

I am having  
a small  
problem  
with the one  
of the user  
accounts.  
This  
particular  
user log on  
to two  
different  
PC's one  
running on  
XP and  
the

Re: User Account Locked Out!!

other  
running on  
2000.

The  
problem  
strats  
occurring  
whenever  
you have to  
change the  
password  
after  
42  
days(default).Once  
he changed  
the  
password in  
one m/c, he  
has  
been  
locked  
out to log  
on to the  
other  
m/c(2000).

thanks

mil
