I am newbie on the topic on using group policy editor and would like to know how to use GPO to administrate certain rights for a limited account user or for a power user account. Is it possible to administer a GPO for a single user or does it have to be done for a group ? It does not matter if the effort involved to administer for a single user is long but wish to play (learn) with GPO.

There is no Active Directory so I am just working with a single Windows XP Pro workstation and not Windows Server running AD.

Group Policy is an infrastructure used to deliver and apply one or more desired configurations or policy settings to a set of targeted users and computers within an Active Directory environment.

See:

<http://technet2.microsoft.com/windowsserver/en/technologies/featured/gp/faq.msp#ECB>

You can work with Local policy though.

See:

<http://www.microsoft.com/technet/security/prodtech/windowsxp/secwinxp/xpsgch05.msp>

Re: GPO Useage

Windows XP Pro workstation and not Windows Server running AD.

Can any one make show me step by step on how to do this. I am just fine getting into GPO and creating user accounts whether a limited or administrator or power group account. Hopefully that will help out somewhat.

Thanks
