Hello MartyBorg,

Start with dcdiag /v and netdiag /v and replmon on both DC's to check for errors. Did you run gpupdate /force or secedit /refreshpolicy machine_policy secedit /refreshpolicy user_policy on the client before or reboot the workstation?

Best regards

Meinolf Weber

** HELP us help YOU!!! http://www.blakjak.demon.co.uk/mul_crss.htm

I have 2 domain controllers.

I create a new GPO with one change to a computer setting and link it to an

OU. I select an existing GPO that makes one change to a user setting, and

link it to the same OU. I place a test machine and a test user in the OU.

When I run Group Policy Modeling on the OU from DC1, both settings work.

When I run GPM on the OU, and select DC2, the new GPO doesn't work. It claims

that it is "empty".

It looks like the DC's synchronise, and I don't see any errors.

Where should I start looking?
