Hello Benoit,

Also check this one's, because your way is not the securest. If a user know, where to search for the file, she/he can read it.

Hello,

Sorry for my english but I'm French.

I have very strange issue with a policy.

I would like to force the local admin password on the computers.

So I created a policy with a script (MS-DOS Command) to apply when the PC

reboot. (Password.cmd)

My script is:

@echo off

net user Administrator P@ssw0rd

When I did rsop.msc from the PC, the polic is applied. When I execute

my password.cmd file from the PC, the local administrator password is

changed. But the policy does not work from the GPO to the computers.

The local administrator password is not changed on all computers.

Have I forgot anything?

Have fun

Benoit
