ADAM users must be authenticated with either Simple bind or Digest auth. You are using SASL bind with SPNEGO which only authenticates Windows users via pass through authentication.

In LDP, change to simple bind and try again. Also, make sure the ADAM user is enabled as well as having a password set.

I have setup ADAM using the "Mary Baker" examples in the guide, used the dsmgt to change the security, set a password of "ABC123", turned the security

back on using dsmgt. I cannot get any of several test routines to authenticate, also will not authenticate using the "LDP" utility. Output here:

```
=====  
0 = ldap_set_option(ld, LDAP_OPT_ENCRYPT, 0)  
res = ldap_bind_s(ld, NULL, &NtAuthIdentity, NEGOTIATE (1158)); // v.3  
{NtAuthIdentity: User='CN=Mary Baker,ou=ADAM users,o=Microsoft,c=us'; Pwd=  
<unavailable>; domain = 'LouisXP'.}  
Error <49>: ldap_bind_s() failed: Invalid Credentials.  
Server error: 8009030C: LdapErr: DSID-0C090441, comment:  
AcceptSecurityContext error, data 52e, va28  
Error 0x8009030C The logon attempt failed  
-----
```

I have changed the user to enabled (as documented in several posts). This is all running on the same XP PRO sp2 machine. Any help appreciated. Thanks.
