Delegating the user directly was my next thought on the matter. I will try that and then report back with the results.
Global Security Group. Domain and Forest in native 2003 mode. 7 DCs. 5 Sites.

Thank you,

Jorge,

I appreciate your response. However, as I have stated, I have indeed read the articles concerned with this and I have followed them. This group is a member of the "GP Creator/Owner" group AND they have been

Re: GPO Management Delegation

explicitly granted the permission to link GPOs in the OU in question. Members of that group can successfully link GPOs already in existence. They cannot create new GPOs —despite the fact that the group they are a member of has been granted that right.

Thank you,

That is an important passage that Jorge pointed out. Thanks, Jorge!

Curious, if you delegate the user directly (not by the group), does it work? If so, what type of group did you create? What functional mode is the domain and forest in? How many DCs and Sites?
