UPDATE:

In step 7 Click the "Find Now" Button and there is your Users and Groups

Thanks!

"Meinolf Weber" wrote:

Hello Joe,

From the features install the Group policy management console and aslo have a look on the RSAT tools there. Remote server administration tools is the successor for administrative tools.

Hello Meinolf,

In Server 2008 where do you change the local security policies for all Servers.

After I joined the servers they all have the same setin as password expiration and password complexity. I know where to change this on the local

machine but how do you change it on the DC for all. Or is this not what is

happenning?

Thank you

Joseph

"Meinolf Weber" wrote:

Re: Please help refresh my memory on AD DC

Hello Joe,

In Administrative tools, you have a lot of management consoles. Also that one for IIS.

On the server where the folder is located that you like to share you have to open the folder properties, choose the sharing tab and do your settings. Only AD is not enough to share a folder.

Hello Meinolf,

Ok I did post in the IIS newsgroups and in IIS.Net a few days back.

I haven't received and answer in this part yet.

In between my last post I logged into IIS MC from the DC I just used the MMC console Not the ADUC as I thought you would.

I created the folder share just from the ADUC and I didn't do anything else.

Where would I go from here Locally at that server or on the DC?

Thank you

Joseph

Hello
Meinolf,

I do thank you for hanging in there for me.

I wanted to add the servers to a Domain Controller for central mangement and easier file sharing. Plus a few applications that require it.

Use the Administrative tools on the DC.

I problem that I am running into is the management of file folders and IIS.

Re: Please help refresh my memory on AD DC

You say
RDP into the
server and
then make
the changes
in IS MMC.
Ok
that is fine
because that
is what I
have been
doing all
this time.
The
question is
when I RDP
in who am I
login in as
?

I meant to connect from the
DC's administrative tools to
the IIS.

It's also possible. But as said
before, I am not IIS
specialist.

Also in a domain you should
use the domain accounts,
local accounts
will have no effect to
configure for domain needs.

If I login as
a local
administrator
I cannot set
permissions
on a
folder in IIS
MMC
because
when select
a user (and
that user is
IUSR_MACHINAME
or
NETWORK
SERVICE

Re: Please help refresh my memory on AD DC

for
ASP.NET) I
get prompted
to
the Domain
Credentials.
Is this
correct?

If the server is domain
member and the accounts
also from the
domain, yes.

Do I no
longer use
the disabled
Red
Arrowed
Users? Do I
select only
the
ones that
begin with
Domain..?
Domain
Users
Domain
Administrators
etc...
If so, now,
Which one
is the
anonymous
account? Is
it still
IUSR_MACHINENAME
Because I
don't see it
available in
a non red
arrow.
Plus
existing
sites already
have this as
the
anonymous
user

Re: Please help refresh my memory on AD DC

(IUSR_MACHINENAME)

Because you installed the IIS before creating the domain you will not have the IIS accounts on the users container in AD users and computer i assume. I don't know enough about IIS and how to make also the IIS available for the complete domain access. Maybe you can export the complete IIS and then import this to a fresh installed IIS with complete domain setup. But again Ask this in an IIS NG. There are your experts.

I must say that this is confusing. I am going to post some images on a Community Server Forum would you please look at them?

Second Question:

I logged on to the DC physically standing at the machine. I created a file share on a remote member

Re: Please help refresh my memory on AD DC

server
through the
Active
Dir
Users and
Computers.
I selected
Everyone as
read only. I
then
finished and
went over to
my
laptop
and logged
in locally
I can see the
share but
not access
it. Is this
correct?

Did you only create the
shared folder with ADUC or
did you also
share it on the server itself
via the sharing tab on the
folder
properties? What share
permissions did you
configure and what NTFS
permissions on the folder.
These both are different
from the
permissions tab ion ADUC,
that let as default.

Thanks
again
Meinolf

Hello
Joe,

Re: Please help refresh my memory on AD DC

I
can
not
really
follow,
what
you
are
trying
to
achieve.
If
you
like
to
set
folder/file
permissions
on
a
remote
server
harddisk/volume
you
should
map
a
drive
or
connect
to
the
server
with
RDP.
If
you
like
to
configure
the
IIS,
you
should
use
the
"Internet
Services
Manager"
from

Re: Please help refresh my memory on AD DC

Re: Please help refresh my memory on AD DC

the
Administrative
tools
and
connect
to
the
server
which
holds
the
IIS.

Hello
Meinolf,

Re: Please help refresh my memory on AD DC

Then
how
do
I
go
about
editing/configuring
permissions
on
folder?

There
is
no
IIS
MMC
in
the
DC
management.
Do
not ever
log on locally
again?
Do
I
just
log on
the
DC
and
go
to
Active
Directory
Users
and
Computers

Right

Click
the
PC
and
select
manage.
When
I
do

Re: Please help refresh my memory on AD DC

that
I
do
not
get
an
IIS
MMC
I
get
most
of
the
others.
I
can
do
disk
management,
SQL,
event
Viewer,
I
can
add
and
modify
users.
I
see
all
that
and
understand
it.
But
when
it
comes
to
adding
a
user
for
a
folder
also
How
to
manage
installed

Re: Please help refresh my memory on AD DC

programs
is
this
done
locally?
Thank
you

Hello
Meinolf,

You
are
correct.
I
can
administer
the
server
from
the
DC
but
I
cannot

Re: Please help refresh my memory on AD DC

set
permissions
on
the
IIS
or
local
box.
I
had
to
login
to
do
so.
This
was
my
entire
concern.
Why
the
red
arrows?

What
am
I
missing
here?

Thanks

Hello
Jorge,

Yes
I
did
thanks.
I
succceccfully
added
all
servers
to
the
domain.
I
just
had
one
question
left
over
after
soing
so.
When

Re: Please help refresh my memory on AD DC

I
logged
in
locally
on
one
of
the
2003
boxes
I
wanted
to
make
a
permissions
change
on
a
folder
an
I
was
asked
to
enter
the
domain
credentials
again.
I
did
so
with
the
domain
admin
credentials
and
I
saw
red
arrows
next
to
the
groups
and
accounts
icons
What

Re: Please help refresh my memory on AD DC

is
that
and
why
was
I
asked
to
login
again
to
make
this
change?
Thanks
