Hello Joe,

With GPMC you can edit the default domain and default domain controllers policy, which by the way is not recommended but possible. These 2 policies are configured with default settings.

For your own needs and for having the option to go back in any kind of problems you should better create your own policies and link them to that levels if you need changes on that. For the beginning you can leave that both as default and start your own policy settings. Before linking them to productional machines use always test computers and OU's and test accounts.

GPO's are also a complex part, start here:

<http://technet.microsoft.com/en-us/windowsserver/grouppolicy/default.aspx>

<http://technet.microsoft.com/en-us/library/cc758290.aspx>

Best regards

Meinolf Weber

Hello Meinolf,

Those tools are installed but where do I go to edit?

Click Group Policy Management and then where?

Thank you

Joseph

"Meinolf Weber" wrote:

Hello Joe,

From the features install the Group policy management console and

Hello Meinolf,

In Server 2008 where do you change the local security policies for all Servers.

After I joined the servers they all have the same setin as password expiration and password complexity. I know where to change this on the local machine but how do you change it on the DC for all. Or is this not what is happenning?

Thank you

Joseph

"Meinolf Weber" wrote:

Hello Joe,

In Administrative tools, you have a lot of management consoles. Also that one for IIS.

On the server where the folder is located that you like to share you have to open the folder properties, choose the sharing tab and do your settings. Only AD is not enough to share a folder.

Hello Meinolf,

Ok I did post in the IIS  
newsgroups and in IIS.Net a  
few days  
back. I haven't received and  
answer in this part yet.

In between my last post I  
logged into IIS MC from the  
DC I just  
used the MMC console Not  
the ADUC as I thought you  
would.

I created the folder share  
just from the ADUC and I  
didn't do  
anything else.

Where would I go from here  
Locally at that server or on  
the DC?

Thank you

for

hanging

in

there

for

me.

I

wanted

to

add

the

servers

to

a

Domain

Controller

for

central

mangement

and

easier

file

sharing.

Plus

a

few

applications

that

require

it.

Re: Please help refresh my memory on AD DC

Use the  
Administrative  
tools on the  
DC.

I  
problem  
that  
I  
am  
running  
into  
is  
the  
management  
of  
file  
folders  
and  
IIS.

You  
say  
RDP  
into the  
server  
and  
then  
make  
the  
changes  
in  
IS  
MMC.  
Ok  
that  
is  
fine  
because  
that  
is  
what  
I  
have  
been  
doing  
all  
this  
time.  
The

Re: Please help refresh my memory on AD DC

question  
is  
when  
I  
RDP  
in  
who  
am  
I  
login  
in  
as  
?

I meant to  
connect  
from the  
DC's  
administrative  
tools to the  
IIS.  
It's also  
possible.  
But as said  
before, i am  
not IIS  
specialist.  
Alos in a  
domain you  
should use  
the domain  
accounts,  
local  
accounts  
will have no  
effect to  
configure  
for domain  
needs.

If  
I  
login  
as  
a  
local  
adminstrator  
I  
cannot

Re: Please help refresh my memory on AD DC

set  
permissions  
on  
a  
folder  
in  
IIS  
MMC  
because  
when  
select  
a  
user  
(and  
that  
user  
is  
IUSR\_MACHINAME  
or  
NETWORK  
SERVICE  
for  
ASP.NET)  
I  
get  
prompted  
to  
the  
Domain  
Credentials.  
Is  
this  
correct?

If the server  
is domain  
member and  
the accounts  
also from  
the  
domain,  
yes.

Do  
I  
no  
longer  
use  
the

Re: Please help refresh my memory on AD DC

disabled  
Red  
Arrowed  
Users?  
Do  
I  
select  
only  
the  
ones  
that  
begin  
with  
Domain..?  
Domain  
Users  
Domain  
Administrators  
etc...  
If  
so,  
now,  
Which  
one  
is  
the  
anonymous  
account?  
Is  
it  
still  
IUSR\_MACHINENAME  
Because  
I  
don't  
see  
it  
available  
in  
a  
non  
red  
arrow.  
Plus  
existing  
sites  
already  
have  
this  
as  
the

Re: Please help refresh my memory on AD DC

Re: Please help refresh my memory on AD DC

anonymous  
user  
(IUSR\_MACHINENAME)

Because  
you  
installed the  
IIS before  
creating the  
domain you  
will  
not have the  
IIS accounts  
on the users  
container in  
AD users  
and  
computer i  
assume. I  
don't know  
enough  
about IIS  
and how to  
make  
also the IIS  
available  
for the  
complete  
domain  
access.  
Maybe you  
can export  
the  
complete  
IIS and then  
import this  
to a fresh  
installed IIS  
with  
complete  
domain  
setup. But  
again Ask  
this in  
an IIS NG.  
There are  
your  
experts.

Re: Please help refresh my memory on AD DC

I  
must  
say  
that  
this  
is  
confusing.

I  
am  
going  
to  
post  
some  
images  
on  
a  
Community  
Server  
Forum  
would  
you  
please  
look  
at  
them?

Second  
Question:

I  
logged  
on  
to  
the  
DC  
physically  
standing  
at  
the  
machine.

I  
created  
a  
file  
share  
on  
a  
remote  
member  
server  
through

Re: Please help refresh my memory on AD DC

the  
Active  
Dir  
Users  
and  
Computers.

I  
selected  
Everyone  
as  
read  
only.

I  
then  
finished  
and  
went  
over  
to  
my  
laptop  
and  
logged  
in  
locally

I  
can  
see  
the  
share  
but  
not  
access  
it.  
Is  
this  
correct?

Did you  
only create  
the shared  
folder with  
ADUC or  
did you also  
share it on  
the server  
itself via the  
sharing tab  
on the  
folder  
properties?

Re: Please help refresh my memory on AD DC

What share permissions did you configure and what NTFS permissions on the folder. These both are different from the permissions tab in ADUC, that let us set as default.

Thanks again  
Meinolf

Hello  
Joe,

I can not really follow, what you are trying to achieve. If you like to set folder/file permissions

Re: Please help refresh my memory on AD DC

on  
a  
remote  
server  
harddisk/volume  
you  
should  
map  
a  
drive  
or  
connect  
to  
the  
server  
with  
RDP.  
If  
you  
like  
to  
configure  
the  
IIS,  
you  
should  
use  
the  
"Internet  
Services  
Manager"  
from  
the  
Administrative  
tools  
and  
connect  
to  
the  
server  
which  
holds  
the  
IIS.

Best  
regards
