I guess you misunderstood my issue. I do not want non-Domain Admins to stop services on DC. I want them to be able to stop a service on their own laptops which I push through GP on DC.

Thanks,

"Jorge de Almeida Pinto [MVP - DS]" <SubstituteThisWithMyFullNameSeparatedByDots@xxxxxxxxxx> wrote in message <news:OJ56pVYVJHA.1116@xxxxxxxxxxxxxxxxxxxxxxxxxxxx>

see:
<http://blogs.dirteam.com/blogs/jorge/archive/2008/02/26/delegating-monitoring-stopping-starting-services->

it is NOT recommended to allow non-Domain Admins do things on DCs as it might compromise the security of the DC. That app shouldn't even be installed on the DC if you ask me

Cheers,
(HOPEFULLY THIS INFORMATION HELPS YOU!)

I had actually modified an existing policy which was already linked and

Re: Group Policy to allow stopping a service

working. Anyways when I tried to disable the service now as a user it worked, so I guess it was just a matter of time.

Thanks anyways,

Sam,

Sam wrote:

I am trying to allow my users to stop a specific service of a third party app. I have that app installed on my Domain Controller as well.

I went to Group Policy and under Computer Configuration > Windows Settings > System Services I modified the service I wanted and added Domain Users with Stop, Start, pause rights.

So you modified the security settings for the service in question, correct?

However Even if I use Group Policy Results in Group Policy Management, it doesn't show this setting and when I tried to stop on a laptop this service I get an access denied.

Have you linked the policy to a n OU that contains (the) computer objects? Since you configured a "Computer Configuration" setting, you need to link the policy to an OU that has computer objects in it.

cheers,

Florian
