1. Can you please re-check if the following line in Online() function of clusweb.vbs script really contains 'w3svc'?

```
set objService = objWmiProvider.get("win32_service='w3svc'")
```

2. Are you able to start and stop w3svc service from command line using commands like "sc stop w3svc" and "sc start w3svc"?

Looks like an interesting error to me. I tried different combinations like disabling w3svc, specifying different invalid service names in clusweb.vbs, uninstalling IIS etc but none of these caused the error mentioned below. Not sure why the service being queried for is (null) and whose ServiceName property is mentioned in the error. It might be possible that the issue is specific to this particular configuration and I would suggest contacting Microsoft product support unless others on the newsgroup have more to add.

All the best!
