Do both DCs have DNS installed?

DNS doesn't usually require much for system resources, if you have defined your ISP's DNS as a forwarder on the forwarders tab you shouldn't be having much of a delay, it should certainly be almost as fast as having your ISP's DNS on your NIC, which by the way, causes errors itself.

When you say:

" > have added 2 DNS lookup addresses from my ISP on the server for  
> *Forward Lookup.* "

Did you add them as forwarders on the forwarder tab or on the NIC?

=====

Use Outlook Express?... Get OE\_Quotefix:

It will strip signature out and more

<http://home.in.tum.de/~jain/software/oe-quotefix/>

=====

Keep a back up of your OE settings and folders with  
OEBackup:

<http://www.oehelp.com/OEBackup/Default.aspx>
