Thanks for replying!:)

The ports are opened, the ftp is able to login, but then it get thrown out.

I get:

An error occurred opening that folder on the ftp server.

Make sure you have permission to access that folder.

Details:

200 type set to A.

227 Entering Passive Mode (192,168,1,101,14,236).

426 Connection Closed; transfer aborted.

I think it passes the logging process and then it gets cut off.

only one article similar but does not apply to server2003.
