- > the NetLogon service doing that, correct?

Yes on a DC the Netlogon service registers most of the records, the exception is the record with the DCs host name, that record is based on the DNS listener address or this registry entry:  
HKEY\_LOCAL\_MACHINE\SYSTEM\CurrentControlSet\Services\DNS\Parameters

Value name: PublishAddresses

Data type: REG\_SZ

Value data: Specify the Internet Protocol (IP) address of the internal interface. If you want to specify more than one IP address, separate the addresses by using spaces.

=====

Use Outlook Express?... Get OE\_Quotefix:

It will strip signature out and more

<http://home.in.tum.de/~jain/software/oe-quotefix/>

=====

Keep a back up of your OE settings and folders with  
OEBackup:
