Right click on the server name in the DNS console, and select the Security tab. The zones must be set to allow inheritable permissions to propagate. And any permissions you want to propagate must be "This object and all child objects" Which is set with the Advanced button on the Security tab.

Use Outlook Express?... Get OE_Quotefix:
It will strip signature out and more
<http://home.in.tum.de/~jain/software/oe-quotefix/>
=====

Keep a back up of your OE settings and folders
with OEBackup:
