Sort of true. Only computers which are in the domain or in TRUSTED Domain can register. (They must be able to be authenticated.) But in most cases this means "domain computers" and definitely does NOT include "workgroup computers" nor computers from unrelated domains.

- > Is dhcp help in registering records to other clients who are not member of
- > domain?.

Yes. As long as the DHCP server can authenticate AND you are able to use DHCP for those machines the DHCP server can be set to register on their behalf.

- > Any other issues/alternatives?.

It's probably best to create a special account for ALL your DHCP servers to share (as long as you use only Win2003 DHCP) and then supply this in the credentials for registration (it's on the advance tab IIRC.)
