I think there's alot running on this machine. I would imagine since it started happening since you reinstalled ISA to establish your internet connection, it tells me ISA is misconfigured.

The easy out is I would remove ISA, remove the connection, disable the outer NIC (multiple NICs IS a whole other issue with domain controllers), and purchase a really inexpensive Linksys DSL/Cable router to handle that task. For the price of about USD \$25.00 (or near that), it will eliminate a whole list of issues and alleviate some of the work this guy is doing.

This posting is provided "AS-IS" with no warranties or guarantees and confers no rights.

If you are having difficulty in reading or finding responses to your post, instead of the website you are using, if I may suggest to use OEx (Outlook Express or any other newsreader of your choosing), and configure a newsgroup account, pointing to news.microsoft.com. This is a direct link into the Microsoft Public Newsgroups, and it is FREE and DOES NOT require a Usenet account with your ISP. With OEx, you can easily find your post, track threads, cross-post, and sort by date, poster's name, watched threads or subject.

Not sure how? It's easy:
How to Configure OEx for Internet News
