Hi thanks again for replying,
I have checked and there are no host headers specified, just the default
ip
address and the tcp port 80. Should i be putting my cname in there?

As I indicated you MIGHT consider trying it to see
if there is a difference.

thanks for the replies,

I am definitely missing something here then, the Default
website does
not appear to have any host headers but how could i find out
for
sure? also, the Default Website is set to (all unassigned) for
the
IP Address, is this where i should be looking?

Re: CNAME not working

Click the "Advanced" button next to the IP IIS listens on to see any host headers.
