Bastiaan wrote:

Kevin I am using HTTP/RPC, that works fine for all my machines.

Problem is that after all suggested changes my Exchange server refuses messages sent to it.

It does send out out the messages.

It recieves ' internal' message send to people on the GAL

It receive message with a long delay,send by Telnetcoomands to port25

It refuses message from the othermail servers.

error back in Outlook:

There was a SMTP communication problem with the recipient's email server. Please contact your system administrator.

<server.zebrafilm.info #5.5.0 smtp;550-"The recipient cannot be verified. Please check all recipients of this">

This happened after the DNS/Exchange changes. It is a bit strange and very inconvenient....

Sounds like its a DNS issue.

Send me your ipconfig /all, netdiag /fix and dcdiag /fix from a command prompt.

Netdiag and dcdiag are in the server support tools on the CD. It would probably be better if you email it to me. Take the nospam. out of my email

Re: Adding A record for reverse DNS

address.

Use Outlook Express?... Get OE_Quotefix:
It will strip signature out and more
<http://home.in.tum.de/~jain/software/oe-quotefix/>
=====

Keep a back up of your OE settings and folders
with OEBackup:
