Hi,  
We have an architecture Windows 2003 Active Directory 2003.  
Some computer used the DHCP to register IP address on system DNS, but  
other computer have got a static IP Address and I should register  
manually IP address on system DNS. So is it possible to register IP  
computer on system DNS automatic ? by Groupe Policy Object ?

I can see on "ADVANCED TCP/IP Settings of DNS" this options  
"Register this connection's addresses in DNS"  
Can I enable this option by GPO ?

Yes, this policy only works on XP and Win2k3.  
Computer Configuration  
-Administrative templates  
-Network  
-DNS Client

Use Outlook Express?... Get OE\_Quotefix:  
It will strip signature out and more

Re: REGISTER DNS

Keep a back up of your OE settings and folders  
with OEBackup:
