Hi,

The ipconfig /all command is normal. The forward lookup zone is updated but the reverse is not. The router is a PIX Firewall.

Thanks,

Charris

Charris <Charris@xxxxxxxxxxxxxxxxxxxxxxxxxxxxxx> typed:

Hi,

We run a Win2003 AD. DHCP is performed by a router. The Forward Lookup Zones are updated but the reverse lookup zones don't. I have tried different combinations but so far no luck.

This is different, reverse lookup zones are usually updated before Forward lookup zones because all PCs need to update the reverse zone is an IP on the subnet served by the zone, where forward lookup zones require the client to have a primary or connection DNS suffix that matches the forward zone.

It is usually not advisable to let routers perform DHCP (at least the inexpensive ones) because they usually cannot assign the correct DNS server and don't assign a connection DNS suffix.
Post an ipconfig /all from a DHCP client.

Best regards,
Kevin D. Goodknecht Sr. [MVP]
Hope This Helps
