Hi it is running in application mode.

Thank you for your time & help!

Josh

>Using a terminal server, users in remote locations can

run

>programs, save files, and use network resources as though

>those resources were installed on the users' own

>computers. By installing programs on a terminal server,

>you can ensure that all users are using the same version

>of a program. If you plan to use this computer to allow

>multiple users to access a program at the same time from

a

>single point of installation, configure this computer as

a

>terminal server.

>

>However, if you plan to use this computer for remote

>administration on Windows Server 2003 operating systems,

>you do not need to install Terminal Server. Instead, you

>can use Remote Desktop for Administration (formerly

>Terminal Services in Remote Administration mode), which

is

>installed by default on computers running one of the

>Windows Server 2003 operating systems. After you enable

>remote connections, Remote Desktop for Administration

>allows you to remotely manage servers from any client

over

>a LAN, WAN, or dial-up connection. Up to two remote

>sessions, plus the console session, can be accessed at

the

microsoft.public.windows.server.general: Terminal server keeps expirering

- >same time, without requiring Terminal Server Licensing.
- >For more information about Remote Desktop for
- >Administration, see Remote Administration using Terminal
- >Services.
- >
- >This topic explains how to use the Configure Your Server
- >Wizard to install and configure a terminal server. After
- >you have completed the Configure Your Server Wizard, you
- >must perform the following additional steps in order to
- >have a basic terminal server.
- >
- >Confirm Internet Explorer Enhanced Security Configuration
- >settings.
- >Configure a Terminal Server License Server on another
- >server.
- > Important
- >
- >This step is required. If you do not install Terminal
- >Server Licensing, your terminal server will stop
- accepting
- >connections from unlicensed clients when the evaluation
- >period ends, 120 days after the first client logon.
- >Install client access licenses (CALs) on the Terminal
- >Server License Server.
- >Install programs on the terminal server.
- >Distribute the latest version of Remote Desktop
- Connection
- >to clients running earlier versions of Remote Desktop
- >Connection for Windows.
- >Specify which users have permission to connect to the
- >terminal server.
- >After you have completed both the Configure Your Server
- >Wizard and these additional required tasks, you will have
- >a basic terminal server.
