I need to have you clarify your problem. Are you saying that after 8 hours
you start getting access denied? Or you can no longer see the network
resources in Network places?

These are two completely different problems and from your original post it
is hard to say exactly what behavior you are having.

If it is Network Places, DNS has nothing to do with it. That would be WINS
or Computer browser problems.

If you are getting access denied that would take another look because by
default domain credentials are good seven days from the last authentication
with a DC.
