Hi,

Anyone have any issues with 2003 task scheduler. Can anyone confirm this, as i have encounter this on 2 different 2003 servers in different environments.

Scenario 1:

login to console as admin and setup a scheduled task with the same admin id and the task fails on every alternate run.

But if you were to logoff the console, it works every run.

But running the task in a command prompt, works every single time.

Scenario 2:

login as admin.

create another id and add the id to the administrator group.

Run the same task using this new id but the job will fail.

It fails even if i try running it in a command prompt.

This does not happen on a NT4 or W2K.

The server is in a workgroup environment.

Any feedback is greatly appreciated.

Thanks.
