I'm out of idea then :)

I've tried your batch file and it works for me, only thing i can think to check is with the error message you get for example

"E:\WindowsServer2003-KB873376-x86-enu.EXE' is not recognized as an internal or external command,"

If you go to the command prompt and type

E:\WindowsServer2003-KB873376-x86-enu.EXE does it run?
