

Task Manager not in system tray in Windows Server 2003

I've read many posts in this group from people who are running Windows Server 2003 (doesn't seem to matter if it's Enterprise or Standard) and can't get the Task Manager icon to show up in their system tray when they minimize it.

Chalk me up as one of those people. I haven't yet seen any responses that indicate that Microsoft has really acknowledged and/or provided a fix for this problem. Does anyone here have information to the contrary? I'd love to be wrong in that assumption. :)

My situation is similar to others whose posts I've read. I've just installed Windows Server 2003 Enterprise Edition, and the icon showed up at first. However, somewhere along the line (I think it was after I installed SQL Server 2000), it simply stopped appearing when iconified. Anyway, I know there are alternative products that will do the same thing. I'd rather just see the functionality fixed in Windows, as that offering, when working, is sufficient for what I need.

Thanks,
Kevin
