I have no spaces or strings. The job history has the following:

/BMONITOR/bmstrep.exe

It is strange because the job is pointing to drive E, which is my CD-ROM. My images folder resides on the D drive. My ADS controller, the share where the ads certificate resides at is also on the D drive. Other than that everything is left in the default location.

I think it is trying to grab the sysprep.inf file, during the installation of ADS, I supplied my Windows Server CD, that is drive E.
