Hi Stanley,
Thanks for the reply.

The admin account used allow me to see the network tree previously until this happened. How did the permissions for the Admin account come to change, and where do I go to change the relevant permissions.

I have been through 'Server Management > Users > Change User Permissions' but the Admin account is not listed amongst the users in the 'change permissions wizard'.

Can you help further or direct me to a Technote?
Thanks again.
Jack
