Hi,

First thaks for the help it's really appreciated.

I tried you're solution and it didn't work. We tried numerous things today and we're still getting the same error in the middle of the splash screen. We tried to do a repair with the windows CD, with the dell driver loaded on a diskette, which looks like they are the same and we got the same problem !!!! We would like to get server image to work on different server with different controller.

If you any other suggestion, please let us know and we'll try it !!!

Thanks !!
