If your site is hosted on a Windows 2003 server, then CDONTS is not available unless the web host has installed it from Windows 2000 server. Under Windows 2003 you would use CDOYSYS instead, which is also available on Windows 2000 server. The coding for this is different from CDONTS. You can find code sample by typing the following into the IE address bar:

? ASP Sending Mail with CDOYSYS
