Hi,

I have a Windows 2003 Enterprise Server... due to a brief power failure it went down ungracefully this evening.

Now, when it boots up, one of the drives is appearing as uninitialized. It used to have data on it. The Event Log reports

The device, \Device\Harddisk1, has a bad block.

How can I recover the disk?

—

—Will

Take the dontspam out of the email to email me. (every even letter until spc.net)

.
