Just found this, may help:

<http://wsus.editme.com/TroubleshootingWSUSInProduction>

Marcus wrote:

thanks Paul, but it doesnt work. even when i give 'full access' to that account on the root drive.

the network service still has insufficient access rights...

"Paul" wrote:

I can only suggest that you check the permissions for the Network Service, it needs read access to the root of the drive and modify on the \WsusContent directory.

Also if you have run IIS lockdown the URL scan filter can cause problems.
