Everytime this box reboots the BE services fail due to login failure. The services will not start until I manually reset password. The BE services are the only ones the require a user account other than the system account. I have tried upgrading to a newer version of BE—same problem, I have tried a different login account—same problem, I created a new login account—same problem. I am pretty sure it has the correct access rights. I am begining to suspect there is some problem with the OS. This box used to be an NT 4 BDC. Last year reinstalled the OS on the C partition to Win2k sp4. We went through a migration to AD and I ran the admtd on this box. Then I ran DCPROMO on it. ADMT never did clean up the sid history very well. So I think it has something to do with this because it has been an on going problem. If anyone has a sugestion Please Help!

.
