-

Hello,

I am running Windows Server 2003 – Enterprise Edition – SP1 on a Netserver and its a member server. I am trying to change the local administrator password but the local Security policy says the password doesn't comply with the password complexity. I am not able to change or disable the "password complexity" setting the local security policy as everything is grayed out. How do i change these settings?

Any help is appreciated.

Skirao
