As incredulous as this may sound, I have installed a StorEdge A-1000 Disk Array (SUN) on a Windows 2003 Server. The unit was part of an E250 that we have taken out of service. The unit is functioning to the point that Windows has recognized the LUNs previously created by RAID Manager under Solaris and I can partition, format and utilize the 'pre-defined' LUNs. However, I would like to be able to Manage the LUNs (create, delete, re-organize, add). I have documentation (805-6890-10 SUN PDF) that points to a version of RAID Manager for Windows (6.22.1) but can find it no where on the SUN Website (only the SPARC version). Does somebody out there know where I can get this RAID Manager or know of another RAID Management software that would work? I have the Resource Tool Kit with Windows 2003 Server but there are apparently no Virtual Disk Services available for the A-1000 which utilizes a Symbios (LSI) RAID Controller. For additional information, I have attached the A-1000 to the PC through an Adaptech EZ-SCSI Differential Controller. The controller BIOS can also only format the previously established LUNs. I would be very appreciative for some help or advice in this area.
