On a newly setup Windows 2003 box, I'm trying to register a dll using regsvr32.dll. I've used this dll for years – <http://www.sevillaonline.com/ActiveX/vb5/RC2Lib.htm> – and have successfully registered it on other Win2003 boxes. This time I'm getting the following error:

LoadLibrary("rc2.dll") failed – The specified module could not be found

I've looked at several articles in the kb, but I don't find anything that is helping. Can anyone give me any insight as to why this might not be working?

Thanks, Andre

.
